Profile Summary

Software and AI Engineer with 4+ years building high-performance systems in warehouse robotics. At GreyOrange I shipped full-stack product, then moved into RD as an Operations Research Scientist designing production solvers for routing and 3D packing. I now build applied-AI workflows with MCP, agent toolchains, and LLM pipelines grounded in live codebases.

Work Experience

Software Engineer II
GreyOrange

Nov 2022 – Aug 2026
Gurugram, India

- As Operations Research Scientist, designed production solvers for operator assignment (VRP) and multi-pallet 3D packing, reaching 85% of the prior algorithm’s theoretical best when off-the-shelf constraint solvers did not scale.
- Engineered and owned highly scalable back-end services using React, Node.js, Erlang, and Spring Boot, boosting data processing speed by 50% and cutting server response time by 40%.
- Built MCP-backed AI workflows on the live Manager Dashboard codebase, including a Jira-to-UI generator that grounded LLMs in source and Playwright captures to produce pixel-accurate mockups.
- Developed a robust Hardware Integration Service to connect and control external devices with in-house cloud systems, improving integration efficiency by 35%.

Full Stack Developer
Visit Health

Apr 2022 – Nov 2022
Gurugram, India

- Engineered and expanded an e-commerce pharmacy store using Node.js, SQL, and React, boosting user engagement by 50% and decreasing server response time by 20%.

Full Stack Developer
Freelancer

Oct 2020 – Feb 2022
Delhi, India

- Delivered international projects focusing on mobile and Progressive Web Apps (PWAs), increasing user satisfaction by 35% and app stability by 45%.

Projects

AI UI generator
GreyOrange · 2026

GitHub

- Built an internal tool that turns GreyOrange Jira tickets into pixel-accurate HTML mockups of the warehouse Manager Dashboard in 90 seconds, replacing a manual PM/design sketch step before engineering starts.
- Grounded generation in the live product: a persistent MCP server with 17 tools over Vue/Quasar source (warm AST code graph) plus Playwright captures of real pages so mockups inherit actual CSS and layout patterns.
- Shipped a Next.js workspace — ticket fetch, streaming Claude Code generation, iframe preview, and chat refinement — with HTTP MCP (stdio fallback) and an optional approved-mockup → GitHub PR path.
- Tech: Next.js, TypeScript, Claude Code, MCP, Firebase

React QuadTree Performance Visualizer
React.js

Live App GitHub

- Developed a high-performance visualizer to demonstrate a frontend performance optimization technique for rendering large datasets in React, directly addressing non-functional requirements.

Education

Masters of Science - Advanced Computer Science
Newcastle University

2026 – 2027
Newcastle Upon Tyne, United Kingdom

Bachelor of Technology - Computer Science and Design
IIT Delhi

2017 – 2021
Delhi, India

Skills

Technologies: MCP, Operations Research, React.js, Java, Node.js, JavaScript, Python, , Spring Boot, SQL,MongoDB, Docker
Concepts: Object-Oriented Programming (OOP), Design Patterns, Data Structures & Algorithms, TDD, Distributed Systems
